VACANCY FOR: Electronics / Software Engineer

RDS Technology Ltd. designs, manufactures and markets a wide range of electronic monitoring and control system products for the industrial and agricultural machinery sectors. Established for over 30 years, RDS is based in a modern facility in Minchinhampton, Gloucestershire. Further details of the company activities are available on www.rdstec.com

An immediate, permanent vacancy exists for an electronics / embedded software engineer to join the development team of RDS Technology Ltd.

The role involves taking a product from concept to reality by creating, or adapting software to run on a range of core hardware platforms that have been developed by RDS. There will also be opportunities to design hardware utilising both analogue & digital technologies.

Working as part of a team of designers, electronics engineers and product application engineers this position involves close co-operation and interaction with a range of disciplines.

The successful candidate will be educated to degree level in electronics or an allied discipline and will be able to demonstrate a practical knowledge of writing embedded software in C. Knowledge of serial data communications and CAN technology will be an advantage.

Your application by email or in writing, together with your current CV should be sent to:-

R.C.G.Danby, RDS Technology Ltd., Cirencester Road, Minchinhampton, Stroud, Gloucestershire. GL6 9BH
